

NEOBRAKE. THE PREFERRED WAY OF GETTING STOPPED SINCE 1988.

Coming to a safe stop is the first thing you want from your brakes, and the last thing you need is to get pulled over for a speeding or traffic violation.

Lucky for you, NeoBrake has had its sights set on improving friction material from the beginning.

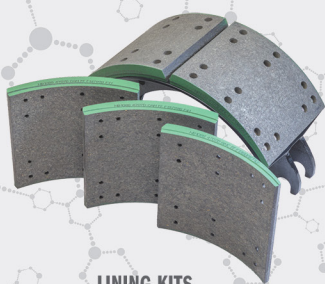

Our Founder & CEO traveled the world in pursuit of the ideal mix of raw materials and manufacturing

variables to give you brakes that better replicate the old asbestos ones.

Then we staked out wheel-end components. Developing the world's first lightweight cast iron brake shoe and re-established old-school quality in our Matrix line of products. Contact us to learn more.
