

NEOBRAKE ULTIBOND™

THE ULTIMATE BRAKE LINING SEAL ADHESIVE

WHY NEOBRAKE ULTIBOND? SECURES. SEALS. AND SAVES.

For operators in rust-breeding regions, UltiBond seal adhesive provides the ultimate last line of defense against rust-jacking, locking down linings and sealing out corrosive troublemakers: moisture, road salt and de-icing chemicals.

But let's say, for the sake of argument, rust does somehow manage to get in under your linings, UltiBond doesn't surrender. Its fierce bonding strength amplifies lining tensile strength, curtailing premature wear and failure for longer life.

WHAT MAKES NEOBRAKE ULTIBOND SPECIAL? EXTRA REINFORCEMENTS.

We see what rust-jacking does to linings and cores virtually every day. So we know what affects wear patterns and why cracks develop. An overlooked contributing factor we've found is poor tensile strength, which is why we purposely formulate greater tensile strength in our linings.

So ours are tougher to crack from the get-go. When you combine the reinforcing power of UltiBond, you double your protection. Triple, with the revolutionary lightweight Matrix NeoCast™ brake shoe. But here's how it all basically goes:

- **Rust Prevention.** *UltiBond seals out moisture, roadway salt and de-icing chemicals from penetrating between lining and shoe table.*
- **Shoe Application.** *We affix UltiBond seal adhesive directly to the shoe table prior to riveting on linings.*
- **Lining Security.** *The added bond between lining and shoe maximizes security against stress cracks and prevents uneven wear and premature failure.*
- **Vibration Reduction.** *UltiBond reduces vibration and related noise for a better ride.*

WHAT DO YOU HAVE TO LOSE? NOT LININGS, THAT'S FOR SURE.

In the unlikely event rust-jacking causes a lining to crack, NeoBrake will replace it free of charge. We call it the *UltiBond No-Crack Guarantee* – and it's good for the life of any lining protected by UltiBond.
